

# MPC1000

THE POWER OF AN MPC WITH THE  
PORTABILITY OF A LAPTOP

## PRODUCTION POWER, ON THE MOVE.

The MPC1000 inherited all of the essential features which made the MPC series a certified hit, so it is not only a perfect complement to its larger MPC siblings, but a powerful Music Production Center in its own right.

The MPC1000 combines a 64-Track MIDI Sequencer and a 32-voice Stereo Digital Sampler, with 16 velocity and pressure sensitive rubber pads. 16MB of on-board memory comes standard and can be expanded up to 128 MB of RAM. You can save your work to a Standard Compact Flash Card (up to 2GB). A preloaded CF card is included, to get you going.

When connected to a Mac or PC via its built-in USB port, you can simply drag and drop data between the computer and the MPC1000's CF card. The MPC1000 is small, rugged and incredibly portable for an easy fit into a backpack or laptop bag for the traveling producer.

## FEATURES

- Pattern-based and linear 64-track sequencer with 32 MIDI channels
- 32-voice drum/phrase sampler with up to 128MB RAM
- Velocity and pressure sensitive pads for expressive programming
- 16 level pad function: One sound on all pads with varied level, tuning, attack, decay or filter per pad
- Two Q-Link sliders for real-time performance control
- Built-in Compact Flash drive and USB port (Mass Storage Class)
- Standard WAV files samples and MIDI Files sequences
- Built-in Analog and Digital I/Os, headphone output and 2 x MIDI In /Out
- Internal sounds in flash
- 4-way sample layering and velocity switching per pad
- 4-pole filters (two 2-pole filters) filtering for each of the 32 voices
- 2 onboard effects processors plus 1 main out effect processor; all which can be used simultaneously
- Outputs can be re-sampled
- Optional available accessory: 128MB Ram Expansion (EXM128)
