

# CONTACT SERIES

***The First approach***  
*To a Sound System*

■ The CONTACT speaker systems are really revolutionary: in an original and compact layout, they offer an outstanding efficiency and a great sound quality, with a wide and versatile control set. A great engineering and design effort has been done to get the optimum performance; choosing customized transducers, new synthetic materials for the cabinets, and a special bi-amplification system (CONTACT CX).

■ The three models CONTACT CX, CONTACT, CONTACT E are all configurable with the addition of the CONTACT XB subwoofer system, allowing the setup of a multi-way system in an extremely simple and cost effective package; and are built with a special stand lock system for easy and safe setup on standard loudspeaker stands.

# CONTACT SERIES

CONTACT CX

## CONSTRUCTION

The cabinets are built in an *high impact enclosure*, allowing rugged sturdiness even with a light weight structure, with an optimal ratio between rigidity and lightweight. All CONTACT speaker systems are configurable as stage monitors, due to the peculiar shape of the enclosure.

## AUDIO QUALITY

The CONTACT speaker systems are built using customized professional loudspeakers built on VOICE SYSTEMS specifications, designed for great linear response at maximum power, with lower distortion rates. In particular, the coaxial component used in CONTACT CX model, with a 1" compression driver and 8" woofer, has a coincident acoustic center that achieves a great natural sound, with a spherical wave guide horn that gives an excellent and accurate stereo imaging.

## AMPLIFIER

All CONTACT speaker systems are supplied with built in processed amplifiers and, thanks to the RICS (Reflex Improved Cooling System) technology, allow an improved performance with increased reliability. As a full range system, or in combination with the CONTACT XB subwoofer system, endowed with a 150 watt (IHF) amplifier, the CONTACT speaker systems maintain an exceptional power to dimensions ratio.

## CONTACT E

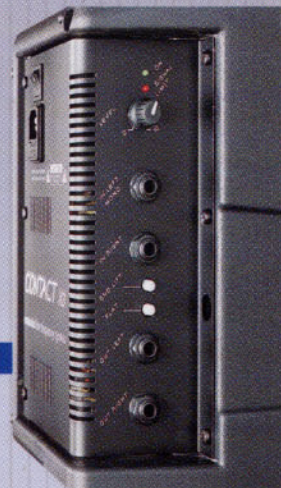

80 W with full range 8" loudspeaker. One Jack input; the control set consists of level and GND lift. Enter the CONTACT world with the best budget!

## CONTACT

120 W with full range 8" loudspeaker. Two Line inputs, one Jack Mic input; the control set consists of eq, levels and GND lift. A great price to performance ratio in the CONTACT series.

## CONTACT CX

bi-amplified (180 W total) with digital controller and coax loudspeaker system with spherical wave guide horn driver. Two Line inputs, one XLR Mic input; the control set consists of eq, levels and GND lift. A hi-tech concentrated juice, for the one who deserve the best!

SPECIFICATIONS:		CONTACT - CX	CONTACT	CONTACT - E	CONTACT - XB
AMPLIFIER	W IHF	150 Low + 30 High	120	80	150
DISTORSION	(THD+N)	< 0.1%			
INPUT IMPEDANCE	kOhms	20 (balanced) 10 (unbalanced)		10 (unbalanced)	20 (bal.) 10 (unbal.)
INPUT SENSITIVITY	dB	0 (0.775 V) Line +30 Mic		0 (0.775 V) Line	
POWER SUPPLY		See label on the apparatus			
SENSITIVITY (SPL 1W/1m)	dB	96	96	92	93
