

# TD-07 SERIES COMPARISON

## Sound, sensitivity and stability: all as standard

The TD-07 series supports every drummer as they take the next step, offering four different kits with unique configurations. But whichever TD-07 kit you choose, you always get these core elements:

**TD-07 module** full of authentic drum sounds and wireless connectivity

**Dual-mesh heads** that capture the nuance of your playing

**Sturdy drum stand** and hardware clamps that are built to last

### TD-07DMK

The entry-level TD-07DMK is the most affordable kit in the TD-07 series, with a compact pad layout and a kick pad that attaches directly to the stand.

Perfect if you need a drum kit that can fit into smaller spaces, with compact pad size and configuration.

The slimline kick pad attaches directly to the drum stand, taking up hardly any room and is ideal if the kit is frequently moved around or needs to be stored away after use.

### TD-07KV

The TD-07KV is great value within the TD-07 family, with an upgraded freestanding kick drum, and bigger crash cymbals.

While offering the same compact stand size as the entry-level TD-07DMK, this updated kit benefits from the added expression and control of a larger individual KD-10 kick pad and CY-8 crash cymbal.

The larger and more substantial kick pad means your leg gets a great work out, helping developing stamina and technique across a range of musical styles.

Crash and ride cymbals are bigger giving you a larger target to hit, along with more movement and swing when struck.

### TD-07KX

The TD-07KX has the most cymbals in the TD-07 lineup thanks to an extra crash, with bigger snare and toms too.

If you have the space and budget, larger drum pads are better for freedom of movement, so choose the TD-07KX for the next step up.

This mid-series kit offers larger snare and toms, giving more space for drum rudiments, fills, and classic drum solos.

The additional crash cymbal introduces more opportunities for playing extra sounds while also developing your co-ordination skills and stamina.

### TD-07KVX

The TD-07KVX is top of the TD-07 range, with a floating VH-10 hi-hat that mounts onto an acoustic hi-hat stand, plus larger V-Cymbals.

Play your most dynamic and dramatic parts with a full array of cymbals, including the freestanding VH-10 hi-hats for a more substantial physical presence and superior playability.

The enlarged crash and ride V-Cymbals give you an even larger target to hit, along with satisfying movement and swing when struck.

The three-zone ride means you can play the bow, bell, and edge of the cymbal for maximum expression.
